

Phoenix

Voice Solutions Server

The latest version of Voice Solutions, Phoenix is a digital solution for recording, managing, and transcribing dictation. It acts as your digital dictation hub and can run on a dedicated or virtual server.

There are many benefits to implementing a Phoenix Server. With minimum training you will quickly see your productivity increase, you will save money using digital instead of analog media, users will enjoy greater mobility, and more. In addition, your data is always secure with encryption, profile permissions, and backup options.

Key Features

Dictation Your Way

Dictate from your computer, cellphone, digital recorder, dictate station, or any telephone

Internet Transcription

Using iNet 3, users can type anywhere, including home, over the internet or a VPN

Secure Your Data

Access logs, profile restrictions, encryption and more to meet today's security policies

Voice-to-Text

Export audio to Dragon NaturallySpeaking for voice-to-text conversion

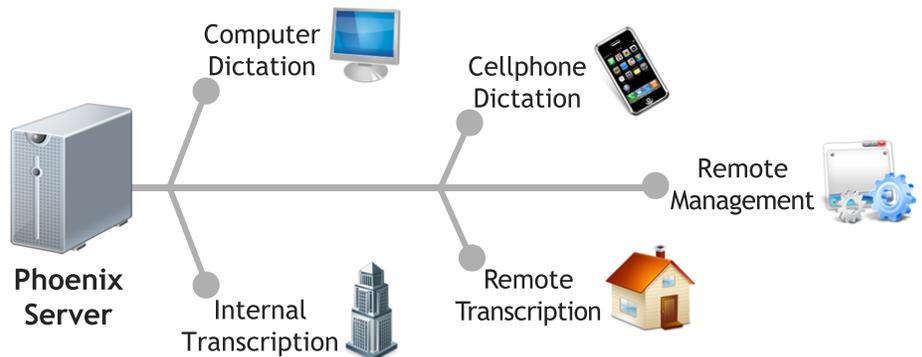

How Phoenix Works

The diagram here illustrates how Phoenix Server acts as your digital dictation hub.

Whether dictating, or transcribing each user has a unique profile which can be customized to meet their needs.

The user-friendly admin console can be ran from any networked computer.

And now enjoy voice-to-text with automatic exporting to Dragon NaturallySpeaking.
